Product Engineer with 3+ years in mobile engineering and 6+ years shipping indie iOS apps.

EXPERIENCE

Indie iOS Developer | Promptside Studio — May '20 – Present

- Built and shipped 5 iOS apps solo; *Holder*, *RetroBudget* and *PaddockPlan* are live on the App Store.
- Launched *RetroBudget*, a *SwiftUI* AI spend tracker for statement PDFs; paying subscribers via *RevenueCat*.
- Built and open-sourced *Excalidraw CLI* (300+ GitHub stars), used by Gas City and Beads to render docs diagrams.

iOS Engineer | Barkie.ai — Jun '25 – Oct '25

- Took Barkie.ai from zero to an internal iOS alpha in 2 weeks as the sole iOS engineer.
- Advanced the app to internal beta with on-device *Core ML/ Vision* golf scorecard scanning and *GHIN API* sync.
- Established *CI/CD* to automate builds, testing, and *TestFlight* distribution.

Software Engineer, Mobile | Gojek — May '22 – Aug '24

- Revamped Help Center UI in *UIKit*, reducing support queries by 15%.
- Built a reusable PIN auth SDK in *Swift* using *VIPER*, adopted across 3 Gojek apps.
- Shipped GoPay *Flutter* features and Server-Driven UI for the homepage, used by tens of millions of people.
- Integrated *Protobuf*-based analytics, cutting third-party dependencies and costs by 30%.

iOS Developer | Google Summer of Code - VideoLAN — Jun '21 – Aug '21

- Prototyped a Continue Watching shelf for VLC for iOS's media library in *UIKit*, to resume recent videos.
- Fixed a Cast UI bug that left the external playback view visible after media resumed locally.

PROJECTS

Pitlane | Prototype: Xcode + Simulator for Cloud Agents - Demo

- Built a tool that lets cloud coding agents on Linux use *Xcode* and the iOS Simulator on a remote Mac.
- Demo: an agent edited Holder, ran it in the Simulator, spotted a contrast bug and fixed it.

Holder | Secure Card Vault - App Store | Source

- Built an iOS card vault with *Keychain* sync, biometric auth, and 99.8% crash-free sessions.
- Built a privacy-safe *WidgetKit* extension for quick card access, exposing only redacted metadata outside the app.

OPEN SOURCE

Swift Build & App Store Connect CLI | Merged contributions - Swift Build | ASC CLI — 2025 – 2026

- Swift Build: 3 merged PRs for warnings-as-errors and non-Apple Clang support.
- App Store Connect CLI: 6 merged PRs adding Xcode Cloud and webhook commands.

SKILLS

Mobile: Swift, SwiftUI, UIKit, Swift Concurrency, WidgetKit, Flutter, Xcode, TestFlight
AI/ML & LLMs: Core ML, Vision, on-device AI, structured outputs, OpenRouter, AI agent tooling
Backend & Tools: REST APIs, Protobuf, Server-Driven UI, TypeScript, Cloudflare Workers, CI/CD, RevenueCat

EDUCATION

Master's in Computer Science | California State University, Sacramento — Aug '24 – Dec '26

- Built *ChartLLM*, a tool-augmented chart analysis system that solved all 26 statistical tasks.
- Placed 112th of 4,894 teams in the National Cyber League cybersecurity competition.

Technology Entrepreneurship | Stanford University — Jun '25 – Aug '25

- Prototyped *Rosie*, an ESP32-C3 storytelling device designed to reduce children's bedtime screen use.
- Conducted customer discovery, competitive analysis, and outreach to local schools for product validation.

BE in Computer Engineering | University of Delhi — Aug '18 – May '22

- Co-authored 2 peer-reviewed papers on blockchain-secured routing for opportunistic IoT, published by IEEE and Springer.
- Led open-source and mobile initiatives and helped ship a Flutter campus app used by 10,000 daily users.

AWARDS

Smart India Hackathon | National Winner: AI System for Lighting and HVAC Optimization — 2020
